○ Abdelrahman Mostafa

PROFILE

Front-End Developer (2+ years) specializing in **React** and **Next.js**. Builds fast, maintainable interfaces with strong UX fundamentals. Experienced in turning product requirements into production-ready features that drive real user value.

EXPERIENCE

Lesoll, Frontend Developer ✐   Jun 2023 – present

- Built and maintained a responsive, SEO-optimized e-commerce platform using **React and Next.js**
- Translated **Figma designs** into accessible, mobile-first UI components
- Integrated property listings, search, filtering, and map features using **RESTful APIs** and **Google Maps API**
- Implemented **localization and multi-language support using i18n**, improving usability for international users
- Developed a **real-time chat system using WebSockets** to enable instant user–agent communication
- Refactored legacy frontend code to improve performance, readability, and maintainability
- Deployed and maintained the application on **AWS (EC2)** with **Nginx**, ensuring scalability and reliability

Dashboard & Analytics

- Developed a dedicated **admin dashboard** for managing listings, users, and categories
- Implemented full **CRUD functionality** with predictable state management using **Redux Toolkit**
- Built analytics views to monitor traffic, content performance, and user activity
- Designed scalable, intuitive UI components for internal admin workflows

Tech Stack: Next.js, React, TypeScript, Tailwind CSS, Redux Toolkit, WebSockets, REST APIs, i18n, AWS (EC2), Nginx, Git, GitHub, Figma

PROJECTS

Dorymart ✐

- Built a responsive e-commerce interface with product listings, cart flow, and **state-driven UI interactions**
- Managed cart and product state using **Redux Toolkit** for predictable, scalable state management
- Implemented **smooth, performance-optimized animations** using **GSAP** to enhance user experience
- Designed reusable UI components with a clean, maintainable architecture

Tech: React, Next.js, Tailwind CSS, Redux Toolkit, GSAP, shadcn/ui

Sa3teen Gad — Full-Stack Productivity Web Application ✐

- Built a full-stack productivity app featuring task management, a Pomodoro timer, and wellness reminders
- Implemented authentication using Google OAuth, enabling secure user sessions and protected data access
- Designed a dual data flow: guest usage powered by **localStorage**, with seamless transition to **MongoDB-backed persistence** upon login
- Leveraged **Next.js API routes** to build the backend, handling tasks, user sessions, and data persistence
- Created responsive, animated interfaces and deployed the application to production

Tech: Next.js (App Router & API Routes), React, TypeScript, Redux Toolkit, MongoDB, Tailwind CSS

EDUCATION

Faculty of Computer Science and Artificial Intelligence - Helwan University, Sep 2018 – Jan 2024
BSc: Computer Science and Information System 🔗
   Key Classes: *Object Oriented Programming - Business Management - Design Patterns.*
